

Guardian EVERYWHERE Hub

The ultimate freedom of reliable safety

Unrivalled safety is now available in Australia & NZ with the Guardian EVERYWHERE Hub. Purpose-built for enterprise & government, the Guardian EVERYWHERE Hub will liberate workers with the ultimate freedom of reliable safety. Our purpose-built enterprise software and intelligent routing enables organisations to track and communicate with their teams deployed around the globe.

The Guardian EVERYWHERE Hub allows you to view a quick snapshot of your entire remote workforce. Color coded teams enable you see the current location of each member, or see a historical bread crumb trail.

Contact your workers via a chat-style text messaging interface or, when equipped, voice text. View pictures and video, or hear geo-tagged audio clips from equipped worker devices.

Compatible with the Garmin inReach Mini, SE+ & Explorer

MONITORING OPTIONS

Guardian EVERYWHERE Hub is available with dedicated API integration for robust and secure 24/7 monitoring and local response co-ordination that includes a monthly testing program or on a subscription based GEOS only option.

HEATMAPS

Heatmaps provide historic location information to create a visual representation of users' movements. Use analytics to optimise operation and identify productivity or areas of concern.

PULSE WELFARE CHECKS

Pulse provides a proactive health and welfare check of your team. It requests the user's status – **I'm OK** or **I'm Not OK**. This tells you how many users responded OK, how many are Not OK and how many have not responded.

GEOFENCING

Create a virtual geofenced perimeter surrounding key worksites in order to safely manage personnel time in specific zones. Entry and exit alerts from geofenced areas sent to predetermined recipients.

Safety when it matters most

Guardian EVERYWHERE Hub

The ultimate freedom of reliable safety

SEAMLESS COMMUNICATION

Intelligent Routing technology provides seamless and dynamic routing of your communications in the most efficient manner based on available bandwidth among four network options—Satellite, Cellular, SMS, and Wi-Fi. Integrated within the Smartphone App, as well as within the Guardian EVERYWHERE Hub, the Intelligent Routing delivers messages between the App and the Hub, providing always connected communications in the most cost effective manner.

SMARTPHONE APP

The Everywhere Smartphone App is an Android and iOS application purpose built for enterprise and government entities with employees on the go. The App operates in standalone mode in Wi-Fi or cellular environments, or it may be paired via Bluetooth with the inReach device to provide global connectivity and communications.

The App provides Everywhere customers individual and team situational awareness via a mapping overlay. In addition, the App provides chat with internal users and global text and email functionality.

! SOS ALERTS

Users in distress can activate a two-step SOS mode to summon emergency assistance.

INTELLIGENT ROUTING

Allows your team to stay seamlessly connected while moving in and out of cellular service. Workers are reachable everywhere, whether they are beyond cellular or inside the office.

PAIRED APP

To ensure your team is always connected as they transition between networks, the companion App uses intelligent routing to determine Wi-Fi, cellular or Iridium network use. It is paired via Bluetooth with the inReach Mini, SE+ or Explorer to provide global connectivity and communications.

STANDALONE APP

The App operates in standalone mode in Wi-Fi or cellular environments. For staff who remain constantly in cell cover, the Safeguard App has all the same features as the inReach companion App, viewable on the same hub with the same functionality.
